

A galaxy of reasons to insulate your home

Insulation in an empty loft can pay for itself in around 2 years. Glass mineral wool insulation (such as Space Loft Roll) is the most cost effective method of insulating to save energy in your home (simply compare the price per m² of the insulation products on offer - i.e. the roll price divided by the m² indicated on the label).

Apart from the energy saving potential and the return on investment, here's why you should install Space Insulation in your loft today:

- Lower energy bills
- Fast installation time (around 3 hours)
- Sound absorption
- Unbeatable A1 fire classification (Space Loft Roll)
- Less handling (Space Loft Roll, Space Blanket expand up to 6 times their size when unrolled in the loft)
- Upgrade the Energy Performance Certificate of your home (this will be required to communicate the energy efficiency of your home to prospective buyers)
- Made using recycled glass bottles and with ECOSE® Technology (Space Loft Roll and Space Blanket)
- Combined loft storage and insulation (Space Board)
- Contribute to reducing energy use to combat global warming and climate change
- The current recommended total thickness of insulation is a minimum of 270mm but 300mm would maximise savings

So there is a Space Insulation solution for every home. By insulating your home with the Space Insulation range of products, you can add value to your home, make it more comfortable, do your bit for the planet and bring those astronomical fuel bills back down to earth.

SPACE INSULATION

For every insulation need, there's a stellar product

ECOSE® Technology is a revolutionary, new, formaldehyde-free binder technology, based on rapidly renewable materials instead of petro-based chemicals. It reduces embodied energy and delivers superior environmental sustainability. Mineral wool with ECOSE® Technology delivers all the benefits you are used to from our traditional mineral wool.

KNAUFINSULATION
it's time to save energy

KNAUFINSULATION
it's time to save energy

SPACE BLANKET

A premium wrapped glass mineral wool product for use between 400mm ceiling joists or on top of existing insulation. The sleeved encapsulation is a part metallised polythene film that can reflect heat and makes it extra easy and comfortable to install. It is also 'compression packed' for less handling - expanding when unrolled. Made using recycled glass bottles and with ECOSE® Technology.

SPACE BOARD

A high performance polystyrene insulation board to provide an insulated storage deck in your loft. This energy saving product prevents heat loss through the roof of your home. Space Board provides a solid storage deck, making it ideal in combination with Space Blanket or Space Loft Roll. Provides the same energy savings as lofts insulated with 270mm of glass mineral wool insulation (2 x Space Board + 18mm chipboard + 100mm loft insulation.)

SPACE LOFTROLL

A eco-friendly glass mineral wool product with pre-cut perforations, enabling use between either 400mm or 600mm horizontal ceiling joists. It is 'compression packed' to minimize handling and will expand out to the required thickness when unwrapped. The 100mm Space Loft Roll should be used between ceiling joists, while the 170mm Space Loft Roll is for use above ceiling joists. Made using recycled glass bottles and with ECOSE® Technology.
